

We once ate off the Earth.

Banana leaves. Sal plates. Palm bowls.

*Nature's original tableware —
biodegradable, beautiful, and guilt-free.*

Then came convenience... at a cost.

Styrofoam trays.
Plastic plates.

*They served us once.
They'll outlive us all. (1,000 years to degrade)*

Every meal leaves a mark

*What looks like a harmless party plate...
Turns into permanent pollution.*

And we use 500 billion of them a year.

*It's time to go back — without
going backward.*

Bagasse Tableware

✨ *Made from sugarcane waste and fully compostable*

💪 *Tough on mess, soft on the planet*
